2009 MMPA CONFERENCE ANNOUNCEMENT

Climate Change and Corporate Environmental Strategy: Accounting and Reporting Issues

Department of Management, University of Toronto Mississauga
Mississauga, Ontario, Canada

November 20, 2009

Location

Credit Valley Golf and Country Club
2500 Old Carriage Road
Mississauga, Ontario

Climate change has a significant impact on global business operations. Investors are increasingly concerned about the financial risks climate change presents, according to the International Investor Forum on Climate Change held in New York last month. Corporate management needs to assess the nature and magnitude of the existing and potential impact of climate change, and to communicate corporate environmental commitment and carbon reduction strategies in a credible way.

Climate change also creates many challenges and opportunities for the accounting profession in measuring and reporting the financial impact of corporate adaptation to a low carbon economy. The aim of the 2009 MMPA Conference is to bring together a group of climate change experts and industry leaders to discuss the impact of climate change on corporate environmental strategy and on the accounting profession.
